

Quality Matters

Crop Baling Products 2024

Working to close the Baling Loop

**MAXI
CARE**

The CLAAS range of Crop Baling Products is designed to get the most from your CLAAS baler. We offer a full range of Netwrap, Twine and Stretchfilm for every situation. Quality is our number one priority, these products will not let you down, from the day you bale until using the forage or straw. Our aim is perfect knotting and wrapping every time for maximum output with minimum downtime.

Simplicity

Our Crop Baling Products are easy to use, starting with product selection. This guide has all the details you need to match the product to the situation. All our products have a guaranteed minimum length so you know how many bales you can make per roll. Roll markings and other smart ideas make changeovers a breeze.

More than quality

We have reduced the environmental impact of our Crop Baling Products. We ensure zero waste in production as standard. Better design of every product means we maintain quality and strength with less plastic and more of our products now also contain recycled materials. Look out for more details in this guide.

Farmers have been closing the loop for millennia by recycling nutrients and organic matter to maintain fertility year after year. Now we have the skills and technology to do the same with the plastic used for bales:

1. Shake & Collect

Once the bale is used, the plastic doesn't go to waste. We need your help with shaking out the used Crop Baling Products to discard any crop leftovers before they are collected.

2. Collect

We partner with collection companies to collect the used Crop Baling Products from the field and transfer them to the recycling Factory.

3. Recycle

The collected materials are cleaned, and processed into new raw materials.

4. Reuse

The recycled raw materials are used to make new products which contain 30% recycled material.

Join us to close the Crop Baling loop

Netwrap

More bales, less waste, Rollatex has it all wrapped up

Rollatex Pro is an advanced Netwrap that improves field operations and bale quality.

Bale+ Technology

Advanced manufacturing produces Netwrap with long roll length and excellent strength at a usable roll weight. Consistent and uniform quality allows easy operation in the field with fewer stoppages. Available in 3800m and 4500m roll lengths giving more bales per roll and fewer changeovers compared to standard 3000m rolls.

CLAAS Covered™

Create better round bales. CLAAS Covered™ means the Netwrap maintains width as it feeds onto the bale for full coverage to maintain bale shape, reduce losses and make handling and storage simple.

Less plastic

Rollatex uses less plastic per bale thanks to Bale+ technology. Save 218kg of plastic every 5000 bales compared to standard wrap (1.7m diameter with 3 wraps). There is zero waste in production and all rolls come packaged in post-consumer recycled materials.

Rollatex Care

This is our first ever Netwrap to be manufactured using recycled materials. It contains 30% recycled materials as standard. Available in 3800m roll lengths only, it has all the quality and user features you expect from Rollatex Pro.

* Limited availability

Netwrap

Easy to use

Rollatex Pro is packed with features to make things simple in the field

- Zebra asymmetrical pattern shows which direction to load the roll and how to unroll the bale when it is used.
- Roll end warning stripe
- EnterNet tag - the easy way of feeding in new rolls into the baler
- Guaranteed minimum roll length, not a +/- average
- Roll carry handles

Rollatex Classic

- An economic alternative for all round balers
- Guaranteed 3,000m roll length
- Pure white colour
- Red End Warning
- Practical carry handles

Rollatex Pro summary

	Length	Width	Weight	Diameter	Rolls / Pallet
Rollatex Pro	2800m	123cm	28.5kg	24cm	36
Rollatex Pro	3800m	123cm	38.5kg	27cm	28
Rollatex Pro	4500m	123cm	42.5kg	27cm	28

Rollatex Classic

	Length	Width	Weight	Diameter	Rolls / Pallet
Rollatex Classic	3000m	123cm	28.8kg	25cm	32

Twine

Better twine, better bales

CLAAS Quadotex and Baletex twine range is suitable for every square baling application

Quadotex - tailor-made for Quadrant balers

CLAAS Quadrant balers offer fast output of high-density bales so they need twine that can stand up to the job. Quadotex twine offers strength, reliability and consistency to secure the highest density bales. Knots stay tied and crops stay secure from the first to the last bale with improved protection to minimize UV degradation. Available in two length/strength combinations, Quadotex sets a benchmark for high-end baling with strong twine using less plastic.

	Spool weight	Spool length	Colour	Spool / Pallet
Quadotex 3400	11.5kg	1170m	Light Green	80
Quadotex 3200XL	11.5kg	1380m	White	80

	Pack weight	Pack length	Colour	Spool / Pallet
BALETEx 130 XL	20kg	2800m	White	56
BALETEx 130 XL Long	19.4kg	3000m	White	56

Baletex - large spools for long baling days

Baletex twine is the best choice for standard baling applications. It is compatible with large and medium square balers including the CLAAS Quadrant range. Available in large spool sizes for fewer changeovers and more bales per spool, it offers a cost-effective combination of strength and length. Excellent knotting characteristics and durability in the field. Including UV protection for save and secured outside storing.

Baletex Care

Every bale uses 25% less plastic through cutting-edge design making stronger, lighter baler twine. Zero waste and optimized energy use in manufacturing, mean Baletex has an environmental footprint to be proud of.

- Strengthening the circular economy
- Reducing carbon footprint
- Includes 30% recycled material

Strechfilm

Excellent strength, quality silage, Wrapex has it covered

Wrapex stretchfilm is strong and durable with superb cling for first-class silage preservation.

Wrapex

Our most advanced silage wrap, a multi-layer blown film with optimal stretching and adhesive properties. Offering high UV protection, weather resistance and low air permeability it keeps silage in great condition until use. Designed to work with round and square bale wrappers, it is the best choice for ensiling crops.

	Dimensions	Colour	Rolls / Pallet
Wrapex	750mm x 1500m x 25µ	Green / Black	40
Wrapex Classic XL	750mm x 1650m x 22µ	Green / Black	40

Wrapex Classic XL

A cost-effective stretchfilm that balances quality, cost and roll length. 10% longer, you can expect 2–3 extra bales per roll meaning fewer roll changes during operations. Pre-stretchable by up to 70% and optimal layer sealing gives extremely smooth placement on the bale.
